

Does the health of our Cowichan children affect you?

In some way it affects all of us

Our children's health is significantly worse than other Vancouver Island communities.

- 21% more low birth weight babies
- 52% more stillbirths
- 66% more infant mortalities
- 44% more teen pregnancies
- More than double the cases of respiratory illness
- 79% more children in care
- 86% more child abuse cases

What can we do?...

Cowichan
